

## Lightweight runners and printed filters improve yield and surface finish in steel castings

### INNOVATION & TECHNOLOGY

#### THE CHALLENGE

Due to rising energy and labour costs, foundries are more than ever required to optimise their manufacturing processes. Cost reductions in terms of scrap, returns, disposal and fettling and improvements in labour productivity are of fundamental importance here.

#### FOUNDRY:

Eickhoff Gießerei GmbH is part of the Eickhoff Group, a globally active family business that has been based in Bochum, Germany, since its foundation in 1864. In addition to the foundry, the Eickhoff Group's portfolio includes mining machines as well as industrial and wind power gearboxes.

#### PARAMETERS

**Metal grade:** GS 17 CrNiMo 6 V  
**Casting weight:** 230 kg  
**Pouring temperature:** 1610 °C  
**Pouring weight (Initial system):** 317 kg  
**Pouring weight (Revised system):** 309 kg  
**Pouring time (Initial system):** 21 s  
**Pouring time (Revised system):** 24 s  
**Yield (Initial system):** 72,5 %  
**Yield (Revised system):** 74,4 %  
**Moulding process:** Sand casting, furan resin-bonded moulding material

#### FOSECO PRODUCTS

1x STELEX\* Optiflow3D Ø100x25 filter  
1x 3D printed filter holder Ø100x25  
1 ½ KALMINEX\* X7 & breaker core BK 7/3  
HOLLOTEX\* EG Runner ST Ø50  
TENOX\* Coating ZBBPX

## OUR SOLUTION

Novel, lightweight HOLLLOTEX EG Runner ST tubes replaced the traditional ceramic holloware system. The parts are lightweight and easy to assemble, improving both productivity and the working environment.

STELEX Optiflow 3D filters offer both filtration efficiency and consistent flow rates. The filters have a higher capacity than foam alternatives and facilitate the filtering of larger castings. Filter structure and porosity can be customised to suit the application.

Easy assembling by push-fit connection

## KEY BENEFITS

- Avoidance of ceramic holloware fragments in the sand system
- Lower sand disposal costs and reduced sand system maintenance costs
- Reduction of the casting weight by 8 kg
- Lower scrap and rework costs due to a reduction in process-related inclusions
- Flexible filter design

THINK BEYOND. SHAPE THE FUTURE.

**VESUVIUS**  
A VESUVIUS GROUP COMPANY

## THE OUTCOME

By using STELEX Optiflow3D filters, printed filter holders and HOLLLOTEX EG Runner ST tubes, the casting weight was reduced and the surface quality improved. The specific filter capacity of the STELEX Optiflow3D filter is in this application 3.9 kg/cm<sup>2</sup>.

STELEX Optiflow 3D printed filters have a consistent structure (Voronoi)

Mould filling - initial system

Mould filling - revised system
